LUMISHINE TONAL LETTER AND NUMBER SYSTEM

LumiShine uses a Tonal Letter System to identify the predominant tone in each shade.

- First Letter = Dominant Tone
- Second Letter = Secondary Tone

LumiShine also uses the Global Tonal Number Key System to identify each tone.

LUMISHINE TIMING AND MIXING

The laws of color state that every color imaginable can be formed by mixing the three primary colors: yellow, red, and blue. Mixing the three primary colors in specific proportions creates brown.

- Natural hair contains all three primary colors. The primaries are present in varying amounts, creating lighter to darker shades of haircolor.
- To refine (neutralize) a color, use its direct OPPOSITE on the Color Wheel. Refinement is commonly known as neutralizing color. For example, use a violet-based shade to neutralize any unwanted yellow tones.

STEP 1: CONSULTATION

In this step, you will determine:

- The client's natural level
- The percentage of existing gray
- The desired level and tone
- The client's hair texture, porosity, and history

LUMISHINE LEVEL SYSTEM

LumiShine is based on the International Level System of 1 - 10, with 1 being the darkest (Black) and 10 being the lightest (Lightest Blonde).

LEVEL	
10	Lightest Blonde
9	Light Blonde
8	Blonde
7	Medium Blonde
6	Dark Blonde
5	Light Brown
4	Medium Brown
3	Dark Brown
2	Darkest Brown
1	Black

STEP 2: FORMULATION

In this step, you will determine:

- Levels of lift, deposit, and tone needed to reach your goal
- If you will enhance or refine the underlying pigment at the lifted level
- What product to use in order to achieve your desired results (permanent crème, demi-permanent crème, or demi-permanent liquid color)
- The volume(s) of developer you will need to use
